Automated Test Scripts in Java (Selenium WebDriver)

Scenario 1: Successful Registration

```java
import org.openqa.selenium.By;

import org.openqa.selenium.WebDriver;

import org.openqa.selenium.WebElement;

import org.openqa.selenium.chrome.ChromeDriver;

public class RegistrationFormTest {

  public static void main(String[] args) {

    System.setProperty("webdriver.chrome.driver", "path to chromedriver.exe");

    WebDriver driver = new ChromeDriver();

    driver.get("http://OnlineRegistrationForm/register");

    WebElement fullName = driver.findElement(By.id("fullName"));

    fullName.sendKeys("Hamza Saeed");

    WebElement emailAddress = driver.findElement(By.id("emailAddress"));

    emailAddress.sendKeys("hamzasaeed.11111@gmail.com");

    WebElement password = driver.findElement(By.id("password"));

    password.sendKeys("Password123!");

    WebElement confirmPassword = driver.findElement(By.id("confirmPassword"));

    confirmPassword.sendKeys("Password123!");

    WebElement dob = driver.findElement(By.id("dob"));

    dob.sendKeys("1995-02-07");

    WebElement genderMale = driver.findElement(By.id("genderMale"));
```

```java
    genderMale.click();

    WebElement newsletterCheckbox = driver.findElement(By.id("newsletterCheckbox"));

    newsletterCheckbox.click();

    WebElement submitButton = driver.findElement(By.id("submitButton"));

    submitButton.click();

    WebElement successMessage = driver.findElement(By.id("successMessage"));

    if(successMessage.isDisplayed()) {

        System.out.println("Successful registration test passed.");

    } else {

        System.out.println("Successful registration test failed.");

    }

    driver.quit();

  }

}
```

Scenario 2: Newsletter Subscription Opt-out

```java
import org.openqa.selenium.By;

import org.openqa.selenium.WebDriver;

import org.openqa.selenium.WebElement;

import org.openqa.selenium.chrome.ChromeDriver;

public class NewsletterSubscriptionTest {

  public static void main(String[] args) {
```

```java
System.setProperty("webdriver.chrome.driver", "path to chromedriver.exe");

    WebDriver driver = new ChromeDriver();
    driver.get("http://OnlineRegistrationForm/register");
    WebElement fullName = driver.findElement(By.id("fullName"));
    fullName.sendKeys("Hamza Saeed");

    WebElement emailAddress = driver.findElement(By.id("emailAddress"));
    emailAddress.sendKeys("hamzasaeed.11111@gmail.com");

    WebElement password = driver.findElement(By.id("password"));
    password.sendKeys("Password456!");

    WebElement confirmPassword = driver.findElement(By.id("confirmPassword"));
    confirmPassword.sendKeys("Password456!");

    WebElement dob = driver.findElement(By.id("dob"));
    dob.sendKeys("1995-05-15");

    WebElement genderFemale = driver.findElement(By.id("genderFemale"));
    genderFemale.click();
    WebElement submitButton = driver.findElement(By.id("submitButton"));
    submitButton.click();

    WebElement successMessage = driver.findElement(By.id("successMessage"));

    if(successMessage.isDisplayed()) {
        System.out.println("Newsletter opt-out test passed.");
```

```java
        } else {

            System.out.println("Newsletter opt-out test failed.");

        }

        driver.quit();

    }

}
```
